# **About This Pamphlet**

Effective July 1, 2015 the 2015 Aquatic Plants and Fish pamphlet replaces the previous version of the pamphlet published in 1998 (APF-1-98). It serves as the Hydraulic Project Approval (HPA) for some types of aquatic weed or plant control and removal including physical and mechanical methods. It does not address using grass carp, herbicides, or water column dye. You may find information regarding those methods at Washington Department of Ecology's website on aquatic plant management at <a href="http://www.ecy.wa.gov/programs/wq/plants/management/index.html">http://www.ecy.wa.gov/programs/wq/plants/management/index.html</a>. Depending on the method you select to control aquatic noxious weeds or beneficial plants, an individual HPA may be required. If you use this pamphlet as your HPA for aquatic weed or plant control, please review it thoroughly and follow all applicable provisions. You may download, save and print a copy of the Aquatic Plants and Fish pamphlet from the WDFW website at <a href="http://wdfw.wa.gov/licensing/aquatic\_plant\_removal/index.html">http://wdfw.wa.gov/licensing/aquatic\_plant\_removal/index.html</a> or request one from a WDFW office. The administrative rules adopted by the Department of Fish and Wildlife (WDFW) addressed in this pamphlet are included in <a href="http://wAC 220-660-290">wAC 220-660-290</a>.

This pamphlet does <u>not</u> contain information about how to identify aquatic noxious weeds or beneficial plants, or make recommendations on which control method would be best in a specific situation. There

are many online and other resources available that you may wish to consult when deciding whether or how to control aquatic plants. One such resource is Washington Department of Ecology's Water Quality website, specifically its pages titled *Aquatic Plants, Algae, and Lakes* at <a href="http://www.ecy.wa.gov/programs/wq/links/plants.html">http://www.ecy.wa.gov/programs/wq/links/plants.html</a>.

# **Limit of WDFW Authority**

- An activity conducted solely to remove or control spartina does not require an HPA.
- An activity conducted solely to remove or control purple loosestrife and that is performed with hand-held tools or equipment, or equipment carried by you when used, does not require an HPA.
- Any other activity conducted solely to remove or control aquatic noxious weeds or aquatic beneficial plants requires either a copy of the current Aquatic Plants and Fish pamphlet available from the department or an individual HPA.
- Information on applying for individual HPAs and how to contact a WDFW biologist is available at the following WDFW website: <a href="http://wdfw.wa.gov/licensing/hpa/">http://wdfw.wa.gov/licensing/hpa/</a>.

# Other Permits May Be Necessary

The Aquatic Plants and Fish pamphlet pertains only to WDFW's administration of hydraulic projects regulated under the Revised Code of Washington (Chapter 77.55 RCW). It is your responsibility to apply for and obtain any additional permits or authorization from other government agencies (local, state and/or federal) and land owners that may be necessary for this project. The Governor's Office for Regulatory Innovation and Assistance (ORIA) at

http://www.oria.wa.gov/site/alias oria/347/default.aspx can assist you in determining your permit needs.

# **Aquatic Vegetation and Fish**

Beneficial plants play a significant role in lakes and streams by providing food and habitat for fish life, stabilizing shorelines, and contributing to nutrient cycling. Sometimes beneficial plants can grow in overabundance, usually because of excessive inputs of nutrients such as nitrogen or phosphorus. In contrast, aquatic noxious weeds can threaten native vegetation, fish life, and the habitat that supports fish life.

Often the best approach to controlling and removing aquatic plants is developing a vegetation management plan. A vegetation management plan is a comprehensive approach to controlling aquatic plants where all strategies are considered and usually some combination of techniques is selected and implemented. These plans should be based on the biology and ecology of the aquatic plant to be

controlled and the environmental characteristics of the site. Integrated vegetation management planning is encouraged to comprehensively address aquatic plant problems for a watercourse.

#### **Definitions**

The following definitions apply to **aquatic plant** control and removal activities that you conduct under authority of the Aquatic Plants and Fish pamphlet. Terms in **bold** font throughout this pamphlet are defined here.

**Aquatic beneficial plant:** all native and nonnative **aquatic plants** except those on the state noxious weed lists in <u>WAC 16-750-005</u>, <u>16-750-011</u>, and <u>16-750-015</u>.

**Aquatic noxious weed:** an **aquatic plant** on the state noxious weed lists in <u>WAC 16-750-005</u>, <u>16-750011</u>, and 16-750-015.

**Aquatic plant:** a native or nonnative emergent, submersed, partially submersed, free-floating, or floating-leaved plant species that is dependent upon fresh, brackish, or marine water ecosystems and includes all stages of development and parts.

**Bottom barrier or screen:** sheets of synthetic or natural fiber material used to cover and kill plants growing on the bottom of a watercourse.

**Diver-operated dredging:** the use of portable suction or hydraulic dredges held by SCUBA divers to remove **aquatic plants**.

**Early infestation:** a stage of development, life history, or area of coverage of an **aquatic noxious weed** that makes one hundred percent control and **eradication** likely to occur.

**Entrained:** the entrapment of fish into a watercourse diversion that has no screen, into high velocity water along the face of an improperly designed screen, or into the vegetation cut by a mechanical harvester.

**Eradication:** to eliminate an **aquatic noxious weed** within an area of infestation.

**Hydraulic project approval (HPA):** A written approval for a hydraulic project signed by the director of WDFW or the director's designee; or an Aquatic Plants and Fish pamphlet issued by the WDFW, which identifies and authorizes specific **aquatic plant** removal and control activities.

**Mechanical harvesting and cutting:** partially removing or controlling **aquatic plants** by using aquatic mechanical harvesters, which cut and collect **aquatic plants**, and mechanical cutters, which only cut **aquatic plants**.

**Purple loosestrife:** *Lythrum salicaria* or *Lythrum virgatum* as classified in <u>RCW 17.10.010 (10)</u> and defined in RCW 17.26.020 (5b).

**Rotovation:** the use of aquatic rotovators that have underwater rototiller-like blades to uproot **aquatic plants** as a means of control.

**Spartina:** *Spartina alterniflora, Spartina anglica, Spartina x townsendii* and *Spartina patens* as classified in RCW 17.10.010 (10) and defined in RCW 17.26.020 (5b).

Weed rolling: the use of a mechanical roller designed to control aquatic plant growth.

# Methods and Requirements for Aquatic Plant Control and Removal

The methods identified in this section are commonly used for aquatic plant removal or control. When using these methods you must follow the rules in this section. If you cannot follow these rules, you may apply to WDFW for an individual HPA to permit exceptions to the rules. Table 1 summarizes the overall permit requirements.

Table 1. Permit Requirements for Aquatic Noxious Weed and Beneficial Plant Removal or Control

Control or removal of aquatic plants under the *Aquatic Plants and Fish* pamphlet may be conducted without timing restriction. However, to minimize the possibility of harm to fish life during vulnerable life stages, please use Table 2 to identify recommended work times.

# Removal of Aquatic Plants by Hand

Hand removal or control of **aquatic plants** can help eradicate an **early infestation** of **aquatic noxious weeds** and can be effective for small, confined areas.

Hand removal or control of both **aquatic noxious weeds** and **aquatic beneficial plants** must comply with the following technical provisions except where otherwise indicated. In addition, you should follow the timing recommendations identified in Table 2 to reduce the possibility of harm to fish life.

- 1. A copy of the current *Aquatic Plants and Fish* pamphlet available from the department serves as an HPA, unless otherwise indicated, and must be on the job site at all times.
- 2. Because of potential impacts to sockeye spawning areas, the department requires individual HPAs for activities in Baker Lake and lakes Osoyoos, Ozette, Pleasant, Cle Elum, Sammamish, and Washington. If authorization is given, the department may require mitigation through a written agreement between the applicant and the department for impacts of raking in the spawning area.
- 3. Work is restricted to hand-pulling, using hand-held tools or equipment, or using equipment that is carried by you when used.
- 4. Removing or controlling aquatic beneficial plants to maintain an access for boating or swimming is allowed along no more than ten linear feet of the applicant's shoreline. The department requires individual HPAs for boating and swimming access projects that cover a larger area.
- 5. When hand-pulling aquatic noxious weeds, remove the entire plant when possible. Completely remove detached plants and plant parts from waters of the state when possible. Dispose of detached plants and plant parts at an upland site so they will not reenter waters of the state.
- 6. Do not remove or disturb existing fish habitat components such as logs, stumps, and large boulders.
- 7. Conduct work in a manner that minimizes the release of sediment and sediment-laden water from the job site.
- 8. Prevent contaminants from the project, such as petroleum products, hydraulic fluid, or any other toxic or harmful materials, from entering or leaching into waters of the state.
- 9. If at any time, as a result of project activities, you observe a fish kill or fish life in distress, you must immediately cease operations and notify the department and the Washington Military Department Emergency Management Division (1-800-258-5990) of the problem. You may not

- resume work until the department gives approval. The department will require additional measures to mitigate the project impacts.
- 10. Do not use contaminated equipment, which can spread plant parts. Thoroughly remove and properly dispose of all viable plants and plant parts from the equipment before using the equipment in waters of the state.

#### **Bottom Barriers and Screens**

**Bottom barriers or screens** can help eradicate an **early infestation** of **aquatic noxious weeds** and are best used in small, confined areas where control of all plants is needed.

**Bottom barrier or screen** projects to control or remove either **aquatic noxious weeds** or **aquatic beneficial plants** must comply with the following technical provisions except where otherwise indicated. In addition, you should follow the timing recommendations identified in Table 2 to reduce the possibility of harm to fish life.

- 1. A copy of the current *Aquatic Plants and Fish* pamphlet available from the department serves as an HPA, unless otherwise indicated, and must be on the job site at all times.
- 2. Because of potential impacts to sockeye spawning areas, the department requires individual HPAs for activities in Baker Lake and lakes Osoyoos, Ozette, Pleasant, Cle Elum, Sammamish, and Washington. If authorization is given, the department may require mitigation through a written agreement between the applicant and the department for impacts of the activity to the spawning area.
- 3. For removing and controlling aquatic noxious weeds, the bottom barrier or screen material can cover no more than fifty percent of the length of the applicant's shoreline. The department requires individual HPAs for bottom barrier or screen projects covering a larger area. Bottom barrier or screen and anchor material consisting of biodegradable material may be left in place. Within two years of placement, unless otherwise approved by the department, completely remove bottom barrier or screen and anchor material that is not biodegradable to encourage recolonization of aquatic beneficial plants.
- 4. To remove or control aquatic beneficial plants to maintain an area for boating or swimming, a bottom barrier or screen and anchor material may be installed along no more than ten linear feet of the applicant's shoreline. The department requires individual HPAs for bottom barrier or screen projects for boating and swimming access projects covering a larger area.
- 5. Securely anchor a bottom barrier or screen material with pea gravel-filled bags, rock, or similar material to prevent billowing and movement off site.
- 6. Regularly maintain a bottom barrier or screen and anchors to ensure the barrier or screen and anchors are functioning properly. Barriers or screens that have moved or are billowing must immediately be securely reinstalled or removed from waters of the state.

- 7. Existing fish habitat components such as logs, stumps, and large boulders may be relocated within the water body if needed to properly install the bottom barrier or screen. Do not remove these habitat components from the water body.
- 8. If at any time, as a result of project activities, you observe a fish kill or fish life in distress, you must immediately cease operations and notify the department and the Washington Military Department Emergency Management Division (1-800-258-5990) of the problem. You may not resume work until the department gives approval. The department will require additional measures to mitigate the project impacts.
- 9. Do not use contaminated equipment, which can spread plant parts. Thoroughly remove and properly dispose of all viable plants and plant parts from the equipment before using the equipment in waters of the state.

### Weed Rolling

Weed rollers are best used when you need to control all aquatic plants.

Weed rolling projects to control or remove both aquatic noxious weeds and aquatic beneficial plants must comply with the following technical provisions except where otherwise indicated.

- 1. A copy of the current *Aquatic Plants and Fish* pamphlet available from the department serves as an HPA, unless otherwise indicated, and must be on the job site at all times.
- 2. Because of potential impacts to sockeye spawning areas, the department requires individual HPAs for activities in Baker Lake and lakes Osoyoos, Ozette, Pleasant, Cle Elum, Sammamish, and Washington. If authorization is given, the department may require mitigation through a written agreement between the applicant and the department for impacts of the activity to the spawning area.
- 3. Weed rollers cannot be used to remove an early infestation of aquatic noxious weeds. Using weed rollers to remove or control all other infestation levels of aquatic noxious weeds can cover an area of no more than two thousand five hundred square feet. The department requires individual HPAs for weed roller projects covering a larger area.
- 4. The department requires individual HPAs to remove or control aquatic beneficial plants.
- 5. When using weed rollers to remove or control aquatic noxious weeds, completely remove detached plants and plant parts from the water body. Dispose of detached plants and plant parts at an upland site so they will not reenter waters of the state.
- 6. Conduct work in a manner that minimizes the release of sediment and sediment-laden water from the job site.
- 7. Prevent contaminants from the project, such as petroleum products, hydraulic fluid, or any other toxic or harmful materials, from entering or leaching into waters of the state.
- 8. If at any time, as a result of project activities, you observe a fish kill or fish life in distress, you must immediately cease operations and notify the department and the Washington Military

- Department Emergency Management Division (1-800-258-5990) of the problem. You may not resume work until the department gives approval. The department will require additional measures to mitigate the project impacts.
- 9. Existing fish habitat components such as logs, stumps, and large boulders may be relocated within the water body if needed to properly install the weed roller. Do not remove these habitat components from the water body.
- 10. Do not use contaminated equipment, which can spread plant parts. Thoroughly remove and properly dispose of all viable plants and plant parts from the equipment before using the equipment in waters of the state.

#### **Mechanical Harvesting and Cutting**

Mechanical harvesting and cutting projects to control or remove both aquatic noxious weeds and aquatic beneficial plants must comply with the following technical provisions except where otherwise indicated. In addition, you should follow the timing recommendations identified in Table 2 to reduce the possibility of harm to fish life.

- 1. A copy of the current *Aquatic Plants and Fish* pamphlet available from the department serves as an HPA, unless otherwise indicated, and must be on the job site at all times.
- 2. Do not use mechanical harvesters and cutters to remove an early infestation of aquatic noxious weeds.
- 3. The department requires individual HPAs to remove aquatic beneficial plants.
- 4. When using mechanical harvesters or cutters to remove or control aquatic noxious weeds, completely remove detached plants and plant parts from the water body. Dispose of detached plants and plant parts at an upland site so they will not reenter waters of the state.
- 5. Prevent contaminants from the project, such as petroleum products, hydraulic fluid, or any other toxic or harmful materials, from entering or leaching into waters of the state. Keep equipment well-maintained and use food-grade oil in the hydraulic system.
- 6. If at any time, as a result of project activities, you observe a fish kill or fish life in distress, you must immediately cease operations and notify the department and the Washington Military Department Emergency Management Division (1-800-258-5990) of the problem. You may not resume work until the department gives approval. The department will require additional measures to mitigate the project impacts.
- 7. Existing fish habitat components such as logs, stumps, and large boulders may be relocated within the water body if needed to operate the equipment. Do not remove these habitat components from the water body.
- 8. Conduct mechanical harvester and cutter operations only in waters deep enough to avoid contacting the bottom with the cutter blades.

- 9. Always operate mechanical harvesters and cutters so that they cause the least adverse impact to fish life.
- 10. Immediately and safely return to the water body all fish life that becomes entrained in the cut vegetation while operating a mechanical harvester.
- 11. Do not use contaminated equipment which can spread plant parts. Thoroughly remove and properly dispose of all viable plants and plant parts from the equipment before using the equipment in waters of the state.
- 12. Limit alteration or disturbance of the bank and bank vegetation to that required to conduct the project. Protect all disturbed areas from erosion using vegetation or other means. Replant the banks within one year with native or other approved woody species.

#### Rotovation

The department requires an individual HPA for **rotovation** projects. **Rotovation** projects to control or remove **aquatic noxious weeds** and **aquatic beneficial plants** may not be conducted under the *Aquatic Plants and Fish* pamphlet.

# Aquatic plant dredging, Diver Assisted Suction (DAS) extraction

**Diver-operated dredging (DAS)** can help eradicate an **early infestation** of **aquatic noxious weeds** and can help conduct long-term maintenance after control or removal using other methods.

**Diver-operated dredging (DAS)** projects to control or remove **aquatic noxious weeds** must comply with the following technical provisions except where otherwise indicated. In addition, you should follow the timing recommendations identified in Table 2 to reduce the possibility of harm to fish life. The department requires individual HPAs to eradicate or control **aquatic beneficial plants** using **diver operated dredging (DAS)**.

For dredging other than **diver-operated dredging** the department requires an individual HPA to control or remove **aquatic plants** and these projects may not be conducted under the *Aquatic Plants and Fish* pamphlet.

- 1. A copy of the current *Aquatic Plants and Fish* pamphlet available from the department serves as an HPA for **diver-operated dredging (DAS)** only, unless otherwise indicated, and must be on the job site at all times.
- Because of potential impacts to sockeye spawning areas, the department requires individual
  HPAs for activities in Baker Lake and lakes Osoyoos, Ozette, Pleasant, Cle Elum, Sammamish, and
  Washington. If authorization is given, the department may require mitigation through a written
  agreement between the applicant and the department for impacts of the activity to the
  spawning area.

- 3. Prevent contaminants from the project, such as petroleum products, hydraulic fluid, or any other toxic or harmful materials, from entering or leaching into waters of the state. Keep equipment well-maintained and use food-grade oil in the hydraulic system.
- 4. If at any time, as a result of project activities, you observe a fish kill or fish life in distress, you must immediately cease operations and notify the department and the Washington Military Department Emergency Management Division (1-800-258-5990) of the problem. You may not resume work until the department gives approval. The department will require additional measures to mitigate the project impacts.
- 5. Existing fish habitat components such as logs, stumps, and large boulders may be relocated within the water body if needed to operate the equipment. Do not remove these habitat components from the water body.
- 6. Always conduct dredging with dredge types and methods that cause the least adverse impact to fish life.
- 7. Do not use contaminated equipment, which can spread plant parts. Thoroughly remove and properly dispose of all viable plants and plant parts from the equipment before using the equipment in waters of the state.
- 8. To avoid stranding fish, the bed must not contain pits, potholes, or large depressions when dredging is finished.
- 9. Limit alteration or disturbance of the bank and bank vegetation to that needed to conduct the project. Protect all disturbed areas from erosion, using vegetation or other means. Replant the banks within one year with native or other approved woody species.
- 10. When using diver-operated dredging to remove or control aquatic noxious weeds, you must completely remove plants and plant parts from the water body. Remove plants and plant parts from the dredge slurry before returning it to the water body. Dispose of dredged bed materials, including detached plants and plant parts, at an upland disposal site so they will not reenter waters of the state.
- 11. Operate a hydraulic dredge with the intake at or below the surface of the material that is being removed. Raise the intake up to three feet above the bed only for brief periods of purging or flushing the intake system.

# Water level manipulation

Manipulating water levels (drawdowns) to remove or control **aquatic noxious weeds** or **aquatic beneficial plants** by exposing plants and root systems to extreme temperature and moisture conditions may be appropriate under specific circumstances. Accurate plant identification is important to ensure success.

The department requires an individual HPA to manipulate water levels and these projects may not be conducted under the *Aquatic Plants and Fish* pamphlet.

#### Recommended Work Times

Table 2 lists the recommended work times for each county and certain waterbodies within each county. The listed timing indicates those periods when WDFW recommends you conduct your project if you are using the pamphlet as the **HPA**. If you wish to conduct your project activities outside of these recommended times please submit an application for an individual **HPA** to WDFW.

- 1. The general work time for a county applies to all state waters within that county, unless otherwise indicated in the table.
- 2. The work time for listed state waters applies to all its tributaries, unless otherwise indicated. Some state waters occur in multiple counties. Check the listing for the county in which you wish to remove or control **aquatic plants** to determine the work time for that water.
- 3. Where a tributary is listed as a boundary, that boundary shall be the line perpendicular to the receiving stream that is projected from the most upstream point of the tributary mouth to the opposite bank of the receiving stream.
- 4. **Aquatic plant** removal and control within waterbodies identified in the table of recommended work times as "Submit Application" are not recommended under the *Aquatic Plants and Fish* pamphlet. Please submit an application for an individual **HPA** to work in these waterbodies.

**Table 2. Recommended Work Times for Removal or Control of Aquatic Plants**
